Treum's platform enables iterative and rapid business process modeling...
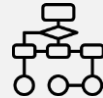

Define process

Model assets

Set Org Permissions

Assign Roles, Users & Permissions

... with ***immutable*** digital blockchain asset tracking and configurable views to anyone in the supply chain

4 Core Components | 1 Easy to Use Platform

Modeler | for business users | model processes, list assets, define attributes to track, determine UI requirements and deploy everything to the blockchain

Tracker | for application users | view the provenance and journey of an asset and allow users to create and view the status of any asset in real time - this is where business happens

Access Manager | for a system administrator | add roles, users and set permissions within a specified organization for who can execute actions and see the journey of each asset
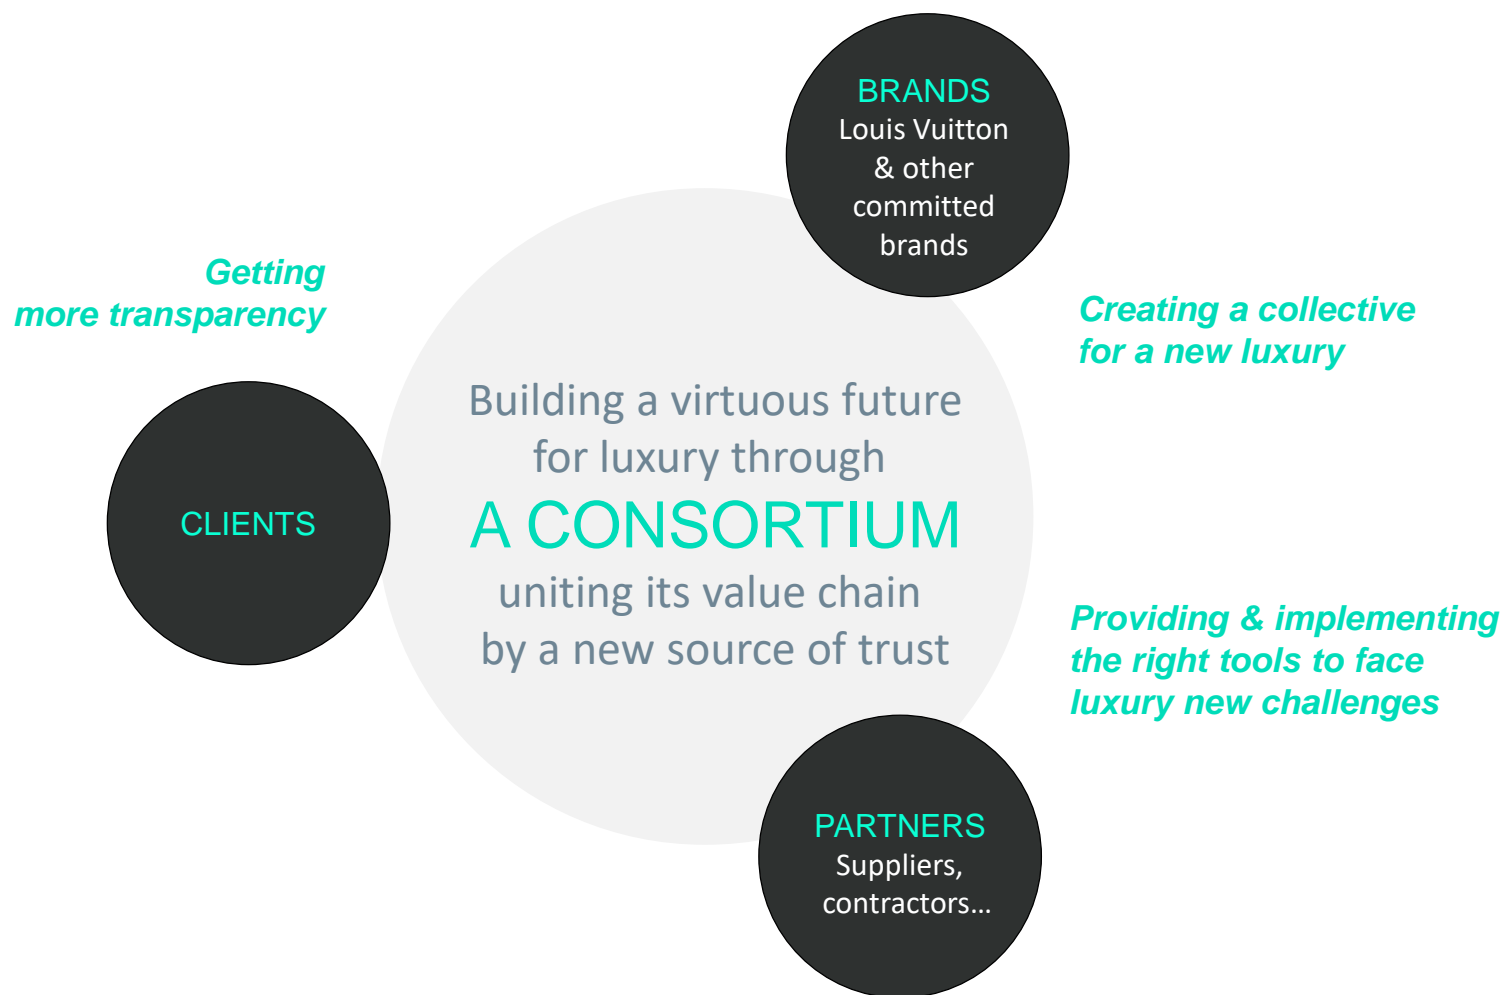

Network Manager | for a network administrator or consortium | provision organizations or vendors as a designated organization and manage specified instances within the permissioned blockchain

- Based on Ethereum
- Compatible with public and private networks
